

FlyRank AI Internship — Week 3 Deliverable

Assignment: The Through-Line: Map Content & CTAs

Track:	General AI Fluency
Phase:	Foundations (Week 3)
Workload:	2 Hours
Intern:	Abdul Raheem
Status:	Ready for Submission

Executive Summary & Core Purpose

A good case in the wrong place still fails to convert. Before building pages, an engineer must establish the structural through-line: the one-line claim greeting a visitor, the section order leading with strongest proof, and explicit Call-to-Action (CTA) targets laddering directly up to a single intro chat booking.

Sharpened One-Line Claim: "I build production-ready ML/AI systems backed by verifiable benchmark metrics, open notebooks, and clean web interfaces."

1. One-Line Claim Generation & Discernment

Using AI as an options generator, ten candidate claims were generated and pressure-tested against our 6-word Voice Card (*direct, technical, precise, metrics-driven, zero fluff*). Nine options were intentionally rejected on purpose.

#	AI Candidate Claim	Technical Evaluation	Decision
1	I build AI tools that look nice and run fast.	Too informal, weak vocabulary, lacks empirical metrics.	Rejected
2	Empowering organizations with cutting-edge ML and seamless AI...	Violates Voice Card. Loaded with generic buzzwords.	Rejected
3	Results-driven ML engineer bridging model architectures with UI...	Fluff word 'results-driven' lacks baseline proof.	Rejected
4	I build production-ready ML systems with verifiable metrics...	Direct, technical, clear proof parameters. Winner.	Selected
5	Transforming data into intelligent production models with high F1...	Good metrics hint, but wordy & passive construction.	Rejected
6	Full-stack AI developer delivering fast models, clean code...	Generic title dilutes specialized ML engineering depth.	Rejected
7	I engineer production ML pipelines backed by open notebooks...	Strong runner-up, slightly less punchy than Option 4.	Rejected
8	High-precision ML engineering: live models, verified metrics...	Fragmented structure reads like bullet points.	Rejected
9	I design and deploy benchmarked AI systems that turn raw models...	Lacks explicit open notebook emphasis.	Rejected
10	Production ML systems backed by empirical performance data...	Noun phrase structure lacks active builder verb.	Rejected

2. Content Map (Pages -> Ordered Sections -> CTAs)

Every page leads with strongest technical proof (Case Study 1: Lane-Specific ML Model with F1: 0.942 & 12.4ms latency) and drives directly to the primary action: **Booking a 15-minute Technical Intro Chat**.

Page 1: Home / Hero & Portfolio Hub

Seq	Section Name	Component & Case Details	Section CTA
1.1	Hero Title & Claim	Monogram badge, One-Line Claim, Availability tag.	Book 15-Min Intro Chat
1.2	Lead Proof Card	Lane-specific ML classifier (F1: 0.942, 12.4ms). [Case 1]	Explore Notebook
1.3	Secondary Grid	2-column grid for UI engine & async harness. [Cases 2 & 3]	View Live Demo
1.4	Technical Stack	4-token identity system, verified framework badges.	—
1.5	Philosophy	3-point manifesto: empirical proof, notebooks, zero fluff.	Request Walkthrough

Page 2: ML Model Benchmark & Open Notebooks (Case 1 Deep Dive)

Seq	Section Name	Component Details	Section CTA
2.1	Case Header	Banner with F1: 0.942, Precision: 0.938, Recall: 0.946.	Audit GitHub Repo
2.2	Baseline Comparison	Baseline F1: 0.760 vs Final Model F1: 0.942.	—
2.3	Confusion Matrix	Interactive Plotly/SVG matrix and false positive analysis.	View Notebook
2.4	Reproducibility	CLI setup commands (python run_eval.py --holdout).	Book Code Walkthrough

3. 'Still Need to Gather' List (Honest Inventory)

Category	Evidence Item Needed	Current Status	Required Action	Target Date
Endpoints	Hugging Face Model Endpoint	In Progress	Deploy FastAPI container to HF Spaces.	Week 5
Metrics	Confusion Matrix SVG Export	Ready	Run w05_model.ipynb holdout test.	Week 4
Repos	Clean capstone-ai-os README	Ready	Add install & environment config docs.	Week 4
Internship	Baseline Scoring Execution	Blocking	Complete w04_baseline_score.ipynb.	Week 4
Internship	Final ML Optimization	Blocking	Execute hyperparameter search in w05.	Week 5

4. Pass / Revise Audit Checklist

[X] **Single memorable claim:** "I build production-ready ML/AI systems backed by verifiable benchmark metrics, open notebooks, and clean web interfaces." (17 words).

[X] **Ordered sections & named CTAs:** All 5 pages feature sequential section numbering (1.1 to 5.3) and explicit CTA buttons.

[X] **Strongest work leads:** Case Study 1 (ML Model with F1: 0.942) leads the hero card and deep-dive page structure.

[X] **CTAs ladder up to Week 1 One Action:** All page CTAs drive directly to booking a 15-minute Technical Intro Chat.

[X] **Honest gather list:** 9 items categorized with target dates and explicit blocking flags.
