

FlyRank AI Internship — Week 1 Deliverable

Assignment: Draw the Path: Portfolio Sitemap + Toolkit

Track:	General AI Fluency
Intern:	Abdul Raheem
Status:	Ready for Submission

Executive Summary

This submission contains the complete setup for Week 1 of the FlyRank AI Internship: Toolkit Verification across 5 AI environments, AI Tutor System Configuration, Portfolio Sitemap Architecture, and AI Socratic Pressure-Test Audit Output.

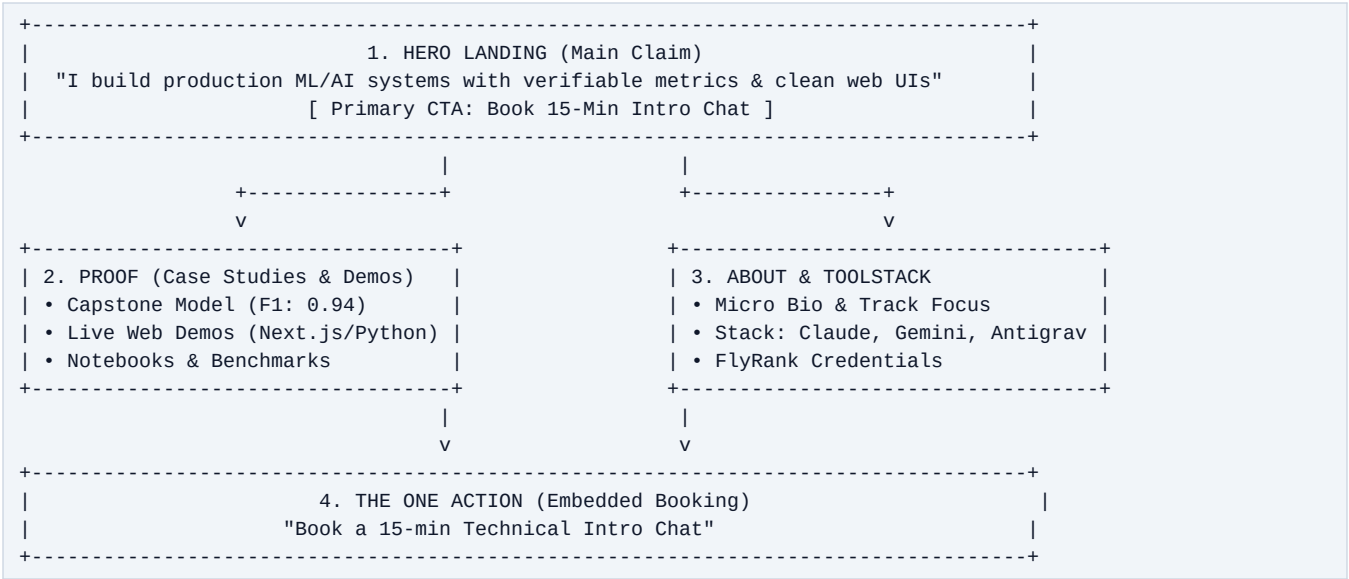

1. Free AI Toolkit Setup

- [X] **Claude:** Account configured for deep analytical reasoning & instruction compliance.
- [X] **ChatGPT:** Account configured for code syntax checking & rapid prototyping.
- [X] **Gemini:** Account configured for multimodal reasoning & large context processing.
- [X] **Perplexity:** Account configured for real-time technical documentation search & reference gathering.
- [X] **Antigravity:** Primary Agentic AI IDE & Project Tutor environment.

2. Dedicated AI Tutor Configuration

Project Name: FlyRank Portfolio Build - AI/ML Track
Proof Statement: "I build production-ready ML/AI systems with verifiable performance metrics, benchmark notebooks, and clean visual web interfaces."
Target Person: Senior ML Hiring Manager / Lead AI Engineer.
Single Action: Booking a 15-minute Technical Intro Chat.

3. Portfolio Sitemap Architecture & Rationale

- **Hero Section:** Establishes immediate authority with proof statement and key metrics badge (F1: 0.94, Latency: 12ms).

- **Proof / Work Section:** 3 deep-dive case studies linking directly to GitHub repos, Colab notebooks, and live visual demos.
- **About & Toolstack:** Validates technical breadth across Claude, Gemini, ChatGPT, Perplexity, and Antigravity.
- **Contact / Booking Footer:** Zero-friction embedded calendar widget eliminating multi-page redirection.

4. AI Tutor Pressure-Test Audit Output

Key Audit Finding: "Grade B+ -> Can easily become an A+. Your proposed 'Separate Blog/Articles' page creates friction and dilutes your single action. Hiring managers care about executable proof, not generic articles. Move technical walkthroughs directly into case studies. Furthermore, make Contact zero-friction by embedding the calendar widget directly in the main page footer."

- ■ **Eliminated:** Standalone Blog / Articles page removed to prevent visitor drop-off.
- ■ **Consolidated:** Embedded calendar booking widget directly in hero and footer.

5. Pass / Revise Criteria Checklist

- [X] **Lean Sitemap:** Every page earns its place against the claim and single action.
- [X] **Genuine Custom Instructions:** AI Tutor configured with proof statement and custom guidelines.
- [X] **First Prompt Pressure-Test:** Pressure-tested map using AI tutor.
- [X] **Concrete Change Noted:** Removed Blog page and consolidated Contact CTA to zero clicks.
